putative alpha-glucosidase gene from barley.";
Plant Mol. Biol. 30:229-241(1996).
-!- CATALYTIC ACTIVITY: Hydrolysis of terminal, non-reducing 1,4-
linked D-glucose residues with release of D-glucose.
-!- TISSUE SPECIFICITY: HIGH LEVELS SEEN IN THE ALEURONE AND SCUTELLUM
AFTER GERMINATION, WHILE LOW LEVELS ARE OUND IN DEVELOPPING SEEDS.
-!- DEVELOPMENTAL STAGE: LEVELS INCREASE STEADILY THROUGHOUT
IMBIBITION REACHING MAXIMUM LEVELS AT DAY 7. DURING GERMINATION,
LEVELS INCREASE FROM DAY 2, REACH MAXIMUM LEVELS AT DAY 3 AND
DECLINE AFTER DAY 5.
-!- INDUCTION: BY GIBBERELLIN A3 (GA).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          279 PAPMPYWSFGFHQCRYGYLNVSDLBRVVARYAKARIPLEVMWTDIDYMDGFKDFTLDRVN

                                                                                            -:-CATALTIC ACTIVITY: Hydrolysis of terminal, non-reducing 1,4-
linked D-glucose residues with release of D-glucose.
-:-CATALTIC ACTIVITY: Hydrolysis of terminal 1,4-linked alpha-D-
glucose residues successively from non-reducing ends of the chairs
with release of beta-D-glucose.
-:-SUBGELLULAR LOCATION: Type II membrane protein. Brush border.
-:-TISSUE SPECIFICITY: EXPRESSED IN SMALL INTESTINE, GRANULOCYTE, AND
KINDEY BUT NOT IN SALIVARY GLAND OR PANCREAS.
-:-PTM: N-AND O-GLYCOSYLATED.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CYTOPLASMIC (POTENTIAL).
SIGNAL-ANCHOR (TYPE-II MEMBRANE PROTEIN)
(POTENTIAL).
               -:- FUNCTION: MAY SERVE AS AN ALTERNATE PATHWAY FOR STARCH DIGESTION WHEN LUMINAL ALFRA-ANYLASE ACTIVITY IS REDUCED BECAUSE OF INMATURITY OR MALNUTRITION. MAY PLAY A UNIQUE ROLE IN THE DIGESTION OF MALTED DIETARY OLIGOSACCHARIDES USED IN FOOD MANUFACTURING.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    (POTENTIAL).

-!- CATALYTIC ACTIVITY: Hydrolysis of terminal, non-reducing 1,4-linked D-glucose residues with release of D-glucose.
-!- SUBCELBULAR LOCATION: Secreted.
-!- SUBLEILBULAR LOCATION: Secreted.

"Identification and cloning of GCA1, a gene that encodes a cell
surface glucoamylase from Candida albicans.";
Med. Mycol. 37:357-366(1999).
-!- CATALYTIC ACTIVITY: Hydrolysis of terminal 1,4-linked alpha-D-
glucose residues successively from non-reducing ends of the chains
with release of beta-D-glucost. ASSOCIATED.
-!- SUBCELLULAR LOCATION: CELL MALL ASSOCIATED.
-!- SIMILARITY: BELONGS TO FAMILY 31 OF GLYCOSYL HYDROLASES.

                                      alpha-amylame, and in isomaltose.
SUBUNIT: THE RESULTING SUCRASE AND ISOMALTASE SUBUNITS STAY
ASSOCIATED WITH ONE ANOTHER IN A COMPLEX BY NON-COVALENT LINKAGES.
SUBCELULAR LOCATION: Type II membrane protein. Brush border.
FTM: THE PRECURSOR IS PROTECLYTICALLY CLEAVED WHEN EXPOSED TO
PANCREALTC PROTEASES IN THE INTESTINAL LUMBN.
PTM: SULFATED (BY SIMILARITY).
DISEASE: Defects in SI are the cause of disaccharide intolerance
CATALYTIC ACTIVITY: Hydrolysis of 1,6-alpha-D-glucosidic linkages
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              (TYPE-II MEMBRANE PROTEIN)

MIV-terminal sequences of pig intestinal sucrase-isomaltase and pro-
sucrase--isomaltase. Implications for the biosynthesis and membrane
insertion of pro-sucrase--isomaltase.";
CARADATORALE DIGESTION.
CARADATORALYTIC ACTIVITY: Hydrolysis of sucrose and maltose by an
alpha-D-glucosidase-type action.
CATALYTIC ACTIVITY: Hydrolysis of sucrose and maltose by an
alpha-D-glucosidase-type action.
CATALYTIC ACTIVITY: Hydrolysis of 1,6-alpha-D-glucosidic linkages
in some oligosaccharides produced from starch and glycogen by
alpha-amylase, and in isomaltose.

Minetocide sequence and expression of alpha-glucosidase-encoding
gene (aga) from Aspergilus oryzae..;
Blosci. Blotechnol. Blochem. 59:1516-1521(1995).
-:- FUNCTION: Hydrolyzes malto-oligosaccharides, but has a low
activity toward soluble starch.
-:- CATALYTIC ACTIVITY: Hydrolysis of terminal, non-reducing 1,4-
linked D-glucose residues with release of D-glucose.
-:- INDUCTION: By maltose.

-!- FUNCTION: THIS GLUCOAMYLASE HAS A SPECIFICITY TOWARD BOTH
ALPHA-1, 4 AND ALPHA-1, 6 LINKAGES.

-!- CATALYTIC ACTIVITY: Hydrolysis of terminal 1,4-linked alpha-D-
glucose residues successively from non-reducing ends of the chains
with release of beta-D-glucose.

-!- SIMILARITY: BELONGS TO FAMILY 31 OF GLYCOSYL HYDROLASES.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
